

MOHAMMED ABDUL AWAIZ

INTRODUCTION

I am a tactician, a strategist, currently skilled in MERN stack development, who's exploring the startup ecosystem by helping founders in terms of tech to become part of their stories! Looking out for any opportunities to learn and grow with people driven by passion :)

EXPERIENCE

SU KNOWLEDGE HUB FOUNDATION

Incubation Center Assistant: Nov 2023 – Aug 2024

Both technical and non-technical domains were my responsibility. Assisted the CEO with incubator's website development, deployment & maintenance, SMM, documentation, designing and so on.
Brought in 5+ startup incubation applications.

BIOREFORM

Freelance Developer: June 2023

Developed the first version of greenybags.com that facilitates sales of hundreds of eco-friendly polymer bags replacing vast amounts of plastic from festivals.

EDVENTURE PARK

Campus Lead: Aug 2022 – March 2024

Learned what it takes to become a student entrepreneur by experiencing development, sales, marketing, operations & design. Explored the startup ecosystem.
Learning and collaborating with startups always!

ACM MJCET

Web Master: Jan 2021 – June 2022

My first team! They basically taught me everything about teamwork & how a group of people can make a difference

EDUCATION

MUFFAKHAM JAH COLLEGE OF ENGINEERING & TECHNOLOGY

B.E IT 2024 Graduate

OTHER INTERESTS

Designing
Marketing

MERN Developer

PROJECTS

INFO CLUSTER | [repo](#)

My most recent & portfolio project with production level practices. It's a **reactjs**-based frontend app, a full-fledged blogging platform that uses **appwrite** for backend & database, **react-hook-forms** for complex form functionality and **redux** for state management.

DENAURLEN | [repo](#)

An auth-app that was an assignment given by a startup for which I learned and implemented **redux**, **react-hook-forms** and **zod** upon **reactjs**, **nodejs** coupled with **express** and **mongoose** for backend, **mongodb** for database and **jwt** for tokens. [This was the given design.](#)

LEGIONCODE | [repo](#)

A real-time chat space with minimal and interactive UX, built with **reactjs**, **socket.io** and **nodejs**. User can quickly create single & group chats to communicate with anybody on the internet without any auth hassle.

OCTO | [repo](#)

A UX focused to-do list with a twist! Built using **reactjs** with its **context API** and **localStorage API**, the app helps organise editable todos with multiple lists.

MEME GENERATOR | [repo](#)

Drag & drop for fun! Creates the famous ranking meme using **drag & drop API** and **DOM** upon **vanilla js**, letting users drag & drop images in their own custom hierarchy.

CURRENCY CONVERTOR | [repo](#)

A simple app to demonstrate **API handling**. Uses **fetch API** with **vanilla js** to display the **JSON** data recieved.

SKILLS

Hard:

Familiar with

- Javascript, Typescript, Python
- Docker
- Node JS, Express JS
- MongoDB
- React JS, Redux
- Material UI, Bootstrap, Tailwind
